CashClip

App Store Defense & Compliance Record

Prepared: May 29, 2026

App: CashClip - Earn Real Money | Apple ID 6759931285

Owner: Jorge Ballen, AB Sustainability Investments LLC

1. Report to Apple App Review (Report a Concern)

Subject: Request to review fraudulent/retaliatory reviews - CashClip (Apple ID 6759931285)

> Hello App Review Team,
>
> We are reporting several 1-star reviews on Version 1.0 that we have reason to believe were posted in retaliation after our platform blocked their abuse.
>
> The platform enforces a single, consistent verification path across every provider. Reward and payout data from each integration - CPX Research, BitLabs, and PayPal - must authenticate against that provider's own dedicated secret and signature on every request. Identity and reward data must match our server-side records consistently across all workflows. Any mismatch is denied, logged, and rate-limited at the API level - it never reaches a user's balance. Reward amounts are determined server-side, not by the client; client-supplied values are discarded.
>
> This enforcement was built before launch, not added in response. During the review period it performed as designed: it blocked an attempted fraudulent withdrawal of $5,000 (stopped by sandboxed payment keys, signature-verified payouts, two-factor authentication, and mandatory manual approval - no funds were ever at risk) and contained a small group of accounts attempting to manipulate balances through the 1.0 client.
>
> In-app fraud controls (verifiable in the app): daily earning cap, a 3-day hold on new accounts before any withdrawal, a maximum of 2 withdrawals per day, and automated activity monitoring for suspicious earning patterns.
>
> Account recovery was clearly disclosed. At registration, users were shown a high-visibility notice stating that providing an email was optional but required to recover an account. Complaints of being 'locked out' originate from users who declined this clearly-disclosed step.
>
> We are not seeking to remove honest criticism - only reviews that appear fraudulent or coordinated. Account evidence and screenshots are available on request.
>
> - Jorge Ballen, AB Sustainability Investments LLC

2. Public Review Replies (App Store Connect)

Professional, compliant responses. Reassure honest users; signal to bad actors that abuse is detected by design.

For 'scam / didn't pay me' reviews

> Every reward and withdrawal on CashClip is verified server-side and confirmed against our payment partners before payout. Payments that pass verification are always honored; activity that fails verification is automatically declined. If you believe a legitimate payout was missed, contact support@absustaininvest.com and we'll review your account directly.

For 'locked out / can't recover account' reviews

> Account recovery requires a verified email, which is clearly presented at sign-up. Accounts created without one cannot be recovered - a security measure that protects every user from unauthorized access. Reach support@absustaininvest.com and we'll help with any account that has a verified email on file.

For 'fake surveys / didn't credit' reviews

> Our surveys come from established research partners (CPX Research, BitLabs) and credit automatically once the partner confirms completion via signed callback. Completions that can't be verified by the partner aren't credited. Questions? support@absustaininvest.com.

General firm reply (use anywhere)

> CashClip uses signature-verified partner integrations, server-side reward validation, and automated fraud monitoring. Legitimate earnings are always protected and paid; attempts to manipulate balances are detected and blocked by design. Genuine concerns are always welcome at support@absustaininvest.com.

3. Supporting Evidence Summary

Real survey partners (live)

- CPX Research and BitLabs both actively serving surveys to users.
- Partner Surveys screen shows real external offers ($1.04, $1.88, $2.72) opened in-browser.
- Surveys credit only on signed partner callback - unverifiable completions are not credited.

Layered fraud protection (in-app, verifiable)

- Daily Earning Cap: $7.00 max per day.
- New Account Hold: 3-day wait before any withdrawal.
- Withdrawal Limits: maximum 2 withdrawals per day.
- Activity Monitoring: auto-detects suspicious earning patterns.
- App Lock: PIN + Face ID.

Code-level enforcement (server-side)

- Per-provider webhook authentication (HMAC signature) - invalid signature rejected and logged.
- PayPal webhook signature verification via PAYPAL_WEBHOOK_ID.
- Server-side reward clamping (PROVIDER_REWARD_RANGES) - client values overwritten.
- Webhook rate limiting + audit logging with scheduled cleanup.
- One dedicated secret per credential per provider - no shared/bundled secrets.

Incident facts

- Blocked attempted fraudulent withdrawal of $5,000 (no funds at risk).
- Sandboxed PayPal keys + 2FA + mandatory manual approval of every payout.
- Small group of abusive accounts contained; Version 1.1.0 (build 38) shipped with hardening.

Principle: Respect the providers (confidential keys, proper platform use), protect the users (layered controls), enforce it in code (consistent verification or access denied). Same standard, top to bottom.
