CASHCLIP · AB SUSTAINABILITY INVESTMENTS

The Holy Grail Notes

Complete preservation record — builds, live fixes, signing, & the OWL

Live: iOS build 29 (v1.0.0) | Prepared: build 39 (v1.1.0) | OWL / Mail Lady inbox | Apple signing

Compiled for Jorge Ballen, Owner

Sources: V39-prep bundle, build manifest, V29 live-fixes record, session recap

Generated June 10, 2026

1 · V39 Prep — Complete Preservation Bundle

Everything prepared for CashClip **build 39 (v1.1.0)**, plus the **proven-live build-29 OTA scripts**, captured June 9 2026 so nothing is ever lost — even if the workspace disconnects.

> The heavy archives (`*.tar.gz`) and the `credentials/` folder are **LOCAL-ONLY** — too big for git and/or sensitive signing material. They live in the grail folder on disk. The source they contain is **also** permanently in git history at the commits noted below, so they can be regenerated anytime with `git archive` .

Contents

- **`full-source-HEAD_f6e07a0.tar.gz`** *(local-only, ~447 MB)* — the ENTIRE current workspace source at HEAD commit `f6e07a0` (git-tracked files, no `node_modules`). Contains everything for V39:
  - `artifacts/cashclip` — the **V39 app** (build 39, v1.1.0) with all the latest fixes
  - `artifacts/api-server` — the backend, including the **OWL / "Mail Lady"** unified support inbox
  - `artifacts/absustain` — corporate site + **`/sc-portal` admin** (where the OWL lives)
  - all docs (`V29_LIVE_FIXES.md` , `STORE_LISTING.md` , `snapshots/` , etc.)
  - Regenerate: `git archive -o out.tar.gz HEAD`
- **`cashclip-OTA-live-good_9c71ec4.tar.gz`** *(local-only, ~4.4 MB)* — the **proven-LIVE build-29 OTA source**: `artifacts/cashclip` at commit `9c71ec4` (good update group `26fa0d4c-44c7-49ca-9e7c-35a7cf835f86` , the version that ran clean for 36 h with correct consent). This is "what was successfully implemented on 29 — the actual live app in distribution."
  Regenerate: `git archive -o out.tar.gz 9c71ec4 artifacts/cashclip`
- **`_layout.build29.tsx`** — the single build-29-safe layout override (HEAD's `_layout` with the 3 build-39-only native modules removed) used to ship JS-only OTAs onto live build 29.
- **`credentials/`** *(local-only, SENSITIVE — never commit)*:
  - `DistCert_CGHKZMC5AY.zip` — Apple iOS **Distribution Certificate** for V39 signing
  - `CREDENTIALS-NOTES.txt` — reference notes for the Apple / Expo signing identifiers

Apple signing ("the apples")

- The **App Store Connect API key** (+ issuer + key id) is stored as Replit **secrets** (`APPLE_ASC_PRIVATE_KEY` / `APPLE_ASC_ISSUER_ID` / `APPLE_ASC_KEY_ID`) **and** inside Expo — so the actual key material is already safe.
- **Apple Team:** AB Sustainability Investments LLC (Company/Organization).
- The **Distribution Certificate** `.p12` is in `credentials/` (local-only).
- No Apple Push Keys needed; Android signing uses the existing CashClip keystore (must match the live Play build 38).

2 · The "Mail Lady" — the OWL

 The unified support Inbox — the Harry-Potter OWL . Runs on the **server**, so she's already live no matter which build (29 or 39) is on phones.

- Flies between **both houses** — carries mail for **CashClip (`@cash-clip.app`)** *and* the **AB Sustaininvest website (`@absustaininvest.com`)** into one place.
- Pulls every email (incl. **support@absustaininvest.com**) into the admin portal (`/sc-portal`) via **Zoho IMAP**.
- **Auto-sorts** each message into buckets: corporate / app / support / other.
- **Reply right from the portal** — no more bouncing between Zoho tabs.
- **Double-send protection** (won't fire the same reply twice) + a **durable, browsable history** of every reply sent.

Honest status: today she *centralizes and organizes* everything in one place — **you still type the reply.** The part that **fully releases you** (auto-drafted / auto-sent replies) is the **vision upgrade** we build on top of her. The plumbing — read, sort, reply, log — is already done and live.

3 · V29 — Fixes Currently Shipped to the Live Version

Live App Store build: 29 (v1.0.0) — the version in distribution.
How these reached it: over-the-air (OTA) JS/content updates, branch `production`, runtimeVersion `1.0.0`.
Purpose: a locked record of everything shipped onto V29, so build **39 carries every one of them** and nothing regresses.

> **Honesty note:** V29's live OTA is pulled from **Project B** (`10994af8…` , owner `absustainabilityinvestmentsllc`), while everyday code points at **Project A** (`aac2a3d9…`). The latest items may not have reached every live device through that split — which is exactly why **building 39 carries all of this natively, with no OTA dance.**

A. Fixes that ride OTA (JS/content — on V29 now)

Money / earnings honesty (most recent)

- **One real balance only** — Home shows the real server balance; removed the fake "+$" celebratory pop.
- **Points, not dollars** — ad cards and video cards show **points** (no dollar amounts on rewards).
- **Display rate from server** — points-to-dollars rate (10,000 pts = $1 display) served by the server so display and real cash can't drift.
- **Secure video credit** — real-ad watches pay through a secure begin/complete flow; prevents lost earnings.
- **Closed exploitable earn paths** — disabled the abusable game/ad reward begin/complete shortcuts.
- **Server-authoritative rewards** — scratch-cards and mini-games pay the real server balance; daily/weekly missions are server-verified.

Wallet

- Balance **refreshes on tab focus**.
- **Live 3-hour hold countdown** display.
- Improved wallet **timer / readiness** logic.

Chipley mascot + celebrations

- Chipley coin mascot across the app (Home greeting wave).
- Celebration overlay fires **only on genuine, server-confirmed wins** (real ad path, all users).
- **Bigger running Chipley** (harder to miss).
- **Sad Chipley** on error / failed-action states.
- (Audio was tried then **removed** — celebrations are silent.)

Navigation / UX

- **Home taps:** balance chip → Wallet, "Today's Earn" strip → Earn.
- **Spin fix:** celebrate only on confirmed wins; auto-retry the spin on a momentary 503 instead of erroring.
- **Memory Match** game scrolls to the bottom.
- Games hub **banner** + adjusted interstitial ad frequency.
- **Check-in streaks:** rewards for longer streaks, 7-day milestone celebration, friendly warning before a streak breaks, button locks after check-in.

Referrals

- Referrals are a **shareable link** (`cash-clip.app/r/<username>`).

B. NOT on V29 — native changes that only land with build 39

These can't ride OTA; they need the new native build:

- **Splash-freeze fix** (the bug that froze the 1.1.0/38 generation) — splash now hides on fonts-ready, consent screen shows after.
- **Ad revenue adapters:** Unity + ironSource + Pangle (wired into the 39 config) — turns on real ad money.
- **Crash/analytics:** Sentry crash reporting, Vexo analytics, LogRocket session replay.
- **Runtime bump** to `1.1.0` .

C. Backend / Admin tools — live on the production API + `/sc-portal`

These run on the **server**, so they're already live no matter which build (29 or 39) is on phones. (Includes the OWL / Mail Lady — see Section 2.)

4 · Session Recap & Status

Running record from June 06, 2026 — key checkpoints, what shipped over OTA, and task status.

Known-good restore points

- **"Original (29)" restore point** — `snapshots/original-29/` (with `RESTORE.md`). Pins the stable build-29 live bundle for rollback.
- **Live good OTA group** — source `26fa0d4c-…` (commit `9c71ec40`), republished live as `991eb089-…` on branch **production**, runtime **1.0.0**. This is what real users on App Store **build 29** run today.
- Replit auto-checkpoints continue to snapshot the codebase + database on every change.

Shipped over OTA to LIVE build 29 (live now)

- **Chipley mascot celebration** — Home greeting wave, reward celebrate, empty states (wallet / referral / surveys / offerwalls)
- **Spin fix** — celebrate ONLY on confirmed wins (convert / withdraw / claim); removed the spin celebration
- **Home taps** — balance chip → Wallet, "Today's Earn" strip → Earn
- **Consent fix** — consent prompt gates correctly (no more re-asking)

Staged & tested, NOT yet live (awaiting your go)

- **Home-balance fix OTA** — makes Home show the **real server balance** (same as Wallet) instead of the local optimistic number.
  - Test-published to **Project A (TestFlight)** → group `2f8f9f39`, build exit code 0, clean bundle on both platforms.
  - **Isolation verified** (money safety): points / storage / earn-client / plugins byte-identical to the live base; no voice; no test files; only the approved changes.
  - **HELD at the gate (T005):** will NOT publish to LIVE build 29 until you explicitly say "ship to build 29."

Other work covered

- Verified AdMob ↔ Unity ad placement casing is all-green (the feared typo did NOT happen)
- Confirmed Unity ad revenue is paid **through AdMob** (Unity is a bidding source) — the Unity "Add payout profile" prompt is unrelated
- Added the **Insticator** authorized-seller line to `app-ads.txt` (in `serve.js`) — pending a **Republish** of the production deployment (web + phone) to go live
- Confirmed deploy gates pass (`check-public-archives`, `typecheck:deploy`)
- Production logs: app is up & healthy (cash-clip.app, api.cash-clip.app all 200); "healthcheck failed" / "signal: terminated" = normal autoscale sleep/wake; pg "SSL WARNING" = harmless deprecation; one ghost account logs a safe skipped error (one-time cleanup offered)
- Purged **9 sensitive** dashboard screenshots (one exposed the Unity API key, one had your IP / security log) and the full screenshot backlog (originals remain in your iPad Photos)

Open items awaiting your decision

- **Republish** the production deployment to make the Insticator app-ads.txt line live.
- **Explicit OK** to ship the Home-balance fix OTA to **LIVE build 29** (unlocks T005).
- **Ghost-account cleanup** — say the word and I'll run a safe read-only check first.

5 · Build-Artifact Backup Manifest

Generated 2026-06-05 — every preserved iOS `.ipa` / Android `.aab`, with its Expo download source.

V39-prep bundle (added 2026-06-09):

- **SOURCE** — full workspace @ HEAD `f6e07a0` → `V39-prep/full-source-HEAD_f6e07a0.tar.gz` (local-only ~447 MB) = V39 app + OWL backend + /sc-portal + docs
- **SOURCE** — cashclip @ `9c71ec4` (LIVE build-29 OTA) → `V39-prep/cashclip-OTA-live-good_9c71ec4.tar.gz` (local-only ~4.4 MB)
- **LAYOUT** — build-29-safe OTA layout override → `V39-prep/_layout.build29.tsx`
- **CREDS** — Apple iOS Distribution Certificate → `V39-prep/credentials/DistCert_CGHKZMC5AY.zip` (local-only, sensitive)
- **APPLE** — ASC API key in Replit secrets: `APPLE_ASC_PRIVATE_KEY` / `APPLE_ASC_ISSUER_ID` / `APPLE_ASC_KEY_ID` (+ in Expo)

Compiled from the V39-prep grail bundle, the build-artifact manifest, the V29 live-fixes record, and the June 2026 session recap. Sensitive signing material and heavy archives are referenced here but kept local-only on disk by design.
