SECRETS_PASSPHRASE	Integration key rotation gate

Mom's secrets:

Secret	Role
INVECE	Admin console access
WORKAROUND_SUPPORT	Seed/recovery password

Dad's secrets:

Secret	Role
WORKAROUND_CASHCLIP	Seed/recovery password
EXPO_TOKLAST	EAS build auth
BITLABS_API_KEY/SECRET	Survey integration
CPX_API_KEY/APP_ID/SECRET	Survey integration

This is the foundation. Everything currently broken traces back to something misplaced or missing in this tree. You tell me where to start.

1.JWT TRIDENTE - Signs the short lived access token on every log in 2. Riprendere signs the 30 day refresh tokenfor the app to remain online for 30 days , and 3. invece controls the admin console access. now i need to remove the authenticador because i created that 2FA before any of these updates and its clogged in the middle of verifications, and even more since i had already changed the password to access.... remember you use BRIDGE_INGRID_WICKED to set that TOTP,... also keep in mind that support and cashclip shared the same secret core (which is Workaround). and the domain you told me to use (https://cash-clip.app/absustain/sc-portal)... i used for log in is different than the original one https://absustaininvest.com, since cash-clip lives in the motherhood which is the registered LLC site- again (absustaininvest.com domain).... and it shouldnt be any under any circumstances editing perfomed on any replit domain since from the beginning i established everything from the domains that were completely separated just integrated to manage the data base more comfortably from a website browser for obvious reasons.... now i dont want you to start acting and making unnecessary changes without consulting with me, just because apparenlty you arent just that accurate and me a simple human can keep
